

DISRUPTIVE SERVICE TODAY IS TOMORROW'S COMPETITIVE ADVANTAGE

With all the new technologies bombarding us every day, it's become more difficult to decipher a steady path for companies and individuals to see what's ahead. How do we guide employees through this new technology and look for the competitive advantage? How do we create a platform for excelling at different levels in companies to ensure success and endure the growing pains to get to the next step and compete?

As our understanding of the makeup of humans increases, so does our ability to create opportunities to improve our performance and create high-value to everyone we come in contact with every day. It's called disrupting the normal way of doing things, or in Jeff Bezos words, "If you wanna do more of something, make the friction less. If you wanna do less of something, make the friction more."

Clayton Christensen's book about disruptive technology, *The Innovator's Dilemma: The revolutionary book that will change the way you do business*, is an enormously influential business book which influenced Amazon and facilitated the creation of the Kindle and AWS. Some companies are reluctant to embrace disruptive technology for fear of alienating customers and undermining their core businesses—Christensen argues that ignoring potential disruption is even costlier.

Disruptive technology is staying faithful to your principles and core values but includes a willingness to explore and make mistakes. Jeff Bezos included both in Amazon's corporate values. His number one core value is to be fanatical about customer service. Interesting, as that's not what we think of when talking about disruptive formats. To be "disruptive" is to cause disorder; to interrupt the normal course of things.

Great examples of disruptive technology are:

- The personal computer (PC) displaced the typewriter and forever changed the way we work and communicate.
- Cell phones made it possible for people to call us anywhere and disrupted the telecom industry.
- Cloud computing has been a hugely disruptive technology in the business world.
- Social networking has a major impact on the way we communicate.
- Email transformed the way we communicate, largely displacing letter-writing and disrupting the postal and greeting card industries.
- Smartphones largely replaced cell phones and PDAs and, because of the available apps, also disrupted pocket cameras, MP3 players, calculators and GPS devices.

Disruptive service is what I focus on and have done so for the past 40 years. I have such a passion for taking any company and introducing them to the power of delivering quality service. It is my guide to delivering exemplary service to every person that walks through your doors, resulting in overall corporate success in terms of customer retention, new sales (via word of mouth), market share, financial vitality, and positive reputation in your community.

"The battle for repeat business is critical to long-term success in today's intensely competitive marketplace. Customer service is not just a competitive edge. In many industries it is *the* competitive edge. Service is the new standard by which customers judge performance."—William Band, partner with the Strategic management Practice, Coopers & Lybrand Consulting Group, Toronto

I refer to this as "disruptive service" because one of the greatest problems in companies today is a reluctance of managers to look at service as a marketing strategy. Too many of them see it as an after-sale service, something relating back to a previous sale rather than a "disruptive service", one they didn't see coming.

It makes me cringe to see companies wasting their potential on ineffective forms of advertising, marketing strategies, or customer service. When a company makes the momentous discovery that customers are really *people*, and when they give customer service at least as much power and influence over decisions as they give financial considerations, then they are well on the road to achieving a competitive advantage and even market dominance.

Just ask some of the top companies: Amazon has a set of practices that helps them manage customer experiences in a proactive way; Home Depot is passionate about the customer experience; Costco is committed to low costs, high wages and excellent customer service

Disruptive service changes the game to your advantage. **RO**

John Tschohl—described by Time and Entrepreneur magazines as a customer service guru and service strategist—is founder and president of the Service Quality Institute, which has developed more than 26 customer service training programs. John has authored several books on customer service, including *Moving Up*, and has just released the 10th edition of *Achieving Excellence Through Customer Service*.
